

OWNERSHIP BENEFITS

Elevator™ Series Portable Vacuum System

The Elevator series of vacuum systems by DuroVac combines exceptional portability and filtration to make cleaning convenient, fast and painless. Here's what you can expect from your purchase.

Low Cost of Ownership

Spend less time and money repairing, maintaining and replacing parts in your system. Our portable vacuums have an average maintenance cost of \$308 per year – the lowest in the industry.

More Uptime

With less maintenance downtime and no need to change filters 3-5 times per year, you get more time to focus on running your facility and keeping things clean.

Fully Assembled and Pre-wired

No on-site costs to install this complete central vacuum system saving you thousands of dollars.

Reliable Operation

Tough enough to handle your industry. Our vacs are built like a tank and designed to operate in the harshest environments.

Factory Warranty on Filters

We stand by our products enough to offer a full one-year warranty on filter cartridges for pulse-jet designs, as well as a two-year warranty on filter bags for standard manual shakers.

Efficient Pulse Jet Cleaning

Improved vacuum design operates on compressed air at 60 PSI, which uses less compressed air and minimizes the wear and tear on filters. Pulse jet only as needed based on the pressure differential on the clean and dirty side of the filter cartridge.

The Power of Positive Displacement

A positive displacement type vacuum producer is superior to a centrifugal exhauster in this application because it pulls harder and uses more energy as material fills the hose and piping system in order to **maintain air flow**. This makes it much less subject to plugged lines.

Quick Delivery

Time is of the essence in your industry, so we offer fast turnaround on approval drawings (typically 24-48 hours) and quick delivery from our large inventory of components.
