

POWERLIFT® SERIES

PowerLift® Hopper Fill Vacuums

Electric, Diesel, Propane

- Filters so good they last years, not months. Low, low cost of operation.
- Trouble-free operation with super-fine powders, heavy abrasive granules, and wet materials.
- Storage is collected in an easy-to-handle extreme duty hopper.

The versatile PowerLift® vacuum works to quickly clean up spills. Use it as a portable or a central vac.

PowerLift® by DuroVac is designed to be more reliable. In fact, based on a 15-year calculation, you'll spend an average of \$308 per year on maintenance.

That's because our filters last 10 times longer than other big vacuum cleaning systems – average of 5.4 years. That means over 15 years, you'll spend about \$5000 on parts – not \$50,000!

Let us help you select a durable industrial vacuum that just keeps on working.

A PowerLift® industrial vacuum system solves large cleaning problems. Here's a 73 Hp diesel with a 2.5 yd³ hopper.

PowerLift® Overview

Move up to 18 tons per hour quickly and easily.

The PowerLift® is an industrial class vacuum system with a huge integrated storage hopper. It can be used as a portable, or it can be connected to a piping system without modification and used as a central vacuum.

It's a DuroVac™!

We take our name seriously. So the PowerLift® works with the lowest possible maintenance costs. To do that the system needs to work perfectly. Our reps are the best of the best, and they'll help you select the most reliable system possible.

The people at DuroVac™ have over 200 years combined experience. Our mission is to design the world's most robust and reliable vacuums.

We back up everything we sell with the world's best warranty – even the filter life.

Compact & Versatile

The PowerLift® has a simple, small footprint, so you can set up almost anywhere.

Need a "ready to go" central vac? You'll save thousands in installation because everything is pre-wired, factory tested, and ready to work.

In most cases, connection to compressed air for filter cleaning is not required to operate properly.

Available with electric motor, diesel Tier 4i, or propane engine.

IF YOU CAN HOLD IT IN YOUR HAND, WE'LL BUILD YOU A VAC THAT WORKS PERFECTLY.

POWERLIFT® SERIES

PowerLift® Benefits & Features

Ingenious design features give you best possible ROI.

1. ULTIMATE FILTRATION

The most trouble-free filters in the industry. Many of our customers have had their machines ten years and not yet replaced their filters!

2. NEMA 4 ELECTRICAL

Class 2 Div 2 electrical is standard for indoor / outdoor use.

3. LEVEL SWITCH

Auto-shut down with light on high level.

4. ABRASION-PROOF INLET

Exclusive "material impact" inlet will never abrade. Your PowerLift is always ready for extreme duty work.

5. EASY UPGRADE TO HEPA

For silica dust and other hazardous materials, all PowerLift models easily meet DOP testing criteria.

6. GIANT SUCTION POWER

Positive displacement vacuum pump achieves very high power. Hoses and piping almost always unplug themselves.

7. QUIET OPERATION

The vac pump is run slowly, and we've specified a "hospital" grade silencer, so noise is well under OSHA requirements.

8. MASSIVE STORAGE

The end dump hopper is designed for extreme duty. It won't bend or flex, and will last for decades with heavy use.

POWERLIFT® SERIES

PowerLift® Options & Upgrades

Configure your vacuum to work perfectly.

Thousands of Solutions

The PowerLift® is an industrial duty vacuum cleaning system designed to collect sand, gravels, metal chips, steel shot and even fine powders.

The system is designed as a completely pre-assembled system, run tested in shop, and ready to work.

Electric powered systems come in any world voltage. And diesel engines are available with and without on-board compressors.

Use with Combustible Dust

The PowerLift® is available with a flameless vent to be NFPA 68-2018 and 654-2017 compliant. The material Kst must be less than 160. If the Kst is greater than 160, specify the DuroVac Elevator™ instead.

Be aware that a system protected against internal explosion is different from an "explosion proof" vacuum. The standard system is designed to operate in an atmosphere rated for CL 2, Div 2 electrical devices (Zone 22).

Only Div 1 classified areas require full explosion-proof electrical enclosures and motors. Please contact DuroVac for advice.

Your PowerLift® Team

Go stress free. Get fast answers from professionals.

You're buried. We know that. So our team will do their best to get answers to you fast.

From customized schematics, to our exclusive assemble-to-order process, we're confident that you'll be pleased with our service.

At least, that's what our customers tell us! With thousands of working vacs, let us configure one for you.

**"Four years old now and the machine still works great.
We use it everyday."**

Rob Bently, Sayre PA talking about a PL50

Making it easy.

We're going to ask you seven or eight easy questions. That's all we need to quote. You're going to like the price, but you need proof. We'll get you the case studies, and references you need to be confident of your choice. We even have a fleet of rental machines that you can use to try before you buy. And we strongly recommend you do try it out. You'll be convinced of the quality. Your users won't want to give it back!
